
Casio fx-300MS

■ 1. Data IN - Enter data values into your calculator

Data values used for this example: 5, 7, 10, 20

Press: **MODE** **2** to enter statistical mode.

Press: **5** **DT** **7** **DT** **10** **DT** **20** **DT** to enter the data into the statistical memory of the calculator.

■ 2. Calculate

Press: **SHIFT** **S-VAR** **1** **≡** to compute the mean of the data.

Press: **SHIFT** **S-VAR** **3** **≡** to compute the standard deviation of the data.

For the example data set, $n = 4$, $\bar{x} = 10.5$, and $s = 6.658328118$.

■ 3. Data OUT - Clear data values from your calculator

Press: **SHIFT** **CLR** **1** **≡** to remove the data values from the calculator's memory.

To change modes you could press **MODE** **1** to return to regular "compute" mode. This is not necessary unless you want to use the standard memory features of the calculator.
